

"A Visit To Klopstockia"

by

Frederick B. Wood*

Mr. L. Bang was alighting from the Trans-Global Transport Co-Op flying submarine at the Klopstockian Capital Airport, when he noticed something similar to a roller coaster in the plaza in front of the Parliament Building. He asked a baggage porter about. The porter said, "That is our symbol of progress. Time is marked along the base from left to right. The upward curve represents the evolutionary development of the universe. You can see the history of the universe inscribed on the monument. You will have to ask the professors at the University about those equations though. They've got some kind of a theory of social integration. The engineers and managers of our industry have made great progress in interpreting science in terms of human needs since some artists figured out how to translate sociological theory so the politicians and businessmen could understand it."
